About Seamless Development

Seamless Development is a professional full service technology company with headquarters in Cherry Hill, New Jersey, specializing in Custom Programming, Web Design, and Network Infrastructure.

Our company was founded on the premise that state-of-the-art technological tools should be made available to everyone at an affordable cost. Whether you are a small company working hard to get ahead, a mid-sized company outgrowing your current technology, or a large corporation striving for streamlined integration of various systems, we can help.

Seamless Development provides end-to-end services including web development and support services, e-commerce, custom applications, and network deployment and administration. Our consultative approach allows us to understand your perspective on your business challenges in order to implement the best solution. Our goal is to address your unique business needs through creative, custom-built technology.

Our engineers are handpicked experts in their respective fields, and hold résumé entries that include the US Army, Google, eBay, and IBM. All of our work is completed in-house utilizing 100% US labor. Our emphasis on cutting-edge technology results in a website product is comparatively more feature-rich while demanding fewer resources.

We pride ourselves on innovation, quick project turnaround, and unrivaled customer service, all at competitive prices. We can help bring your business to the next level at competitive rates that make investing in your company's future a reality. At Seamless Development, we see every client as our business partner; when you succeed, we succeed.

Seamless Development is a Microsoft Certified Partner, an eBay Developer Program member, PayPal certified developer, and a BBB Accredited Business.

Seamless Solutions

Programming

Seamless Development prides itself on creating customized, scalable web sites and web applications. Each project is built using the latest development tools and methodologies including .NET 3.5 and ASP.NET AJAX. SQL server technology provides a safe and secure backbone for all data storage needs. Various solutions are available to suit virtually any business technology need you may have. Contact us today for more info and a custom quote.

Networking

Seamless Development is the creator of Network V2, the first and only network shipped pre-configured to a client location, ready to use out of the box. Through careful analysis of small business needs and network requirements, Seamless Development helps their clients purchase the needed hardware and software, personally configures it, and ships it ready for use to the client.

Seamless Development also offers additional network services including: network infrastructure consulting and design; maintenance of existing networks; and scalable network creation and administration for any size business. Remote help desk support is available via live chat, phone, email, and VPN. Custom server configuration and remote PC backup gives an enterprise-level backup solution for valuable data at an affordable price.

- Advanced deployment technology
 - Enhanced error handling
 - Network infrastructure and load balancing
 - Configuration and replication of SQL databases
 - Server load balancing for optimal content availability
- Complete system configuration
 - System need consulting
 - Hardware integration or replacement
 - Hardware procurement through Dell partnership
 - Remote system management
 - Proactive system monitoring

Support

Seamless Development goes beyond just the creation of technology solutions to offer full support of created applications and networking systems. We offer a variety of support options designed to match your specific needs from basic maintenance to complete remote support packages.

- Support services
 - Maintenance plans
 - Hosting services
 - Exchange email
 - Spam filtering
 - Remote network support
 - Application support
 - Server support

Online Shopping and eBay Specialists

Through years of extensive experience creating the most exciting and effective online stores, Seamless has become the leading source for apparel resellers looking to enhance their online presence and increase sales.

Our accomplishments include the creation and implementation of a complete solution for one of the top apparel resellers on eBay, and full system replacement for one of the world's largest premium skincare product companies. We have also created various custom applications for growing businesses of all sizes, helping them to achieve their goals through technology.

Seamless can help new businesses get started in the online selling world, as well as provide solutions for established companies looking to increase their market share. Our consultative approach ensures that we understand your business needs so we can make the best possible recommendations for technology solutions to meet those needs.

Our flexible solutions mean that you can select the specific technology features you want in order to best grow your business, with none of the extras you don't need. A Seamless system will be tailored to fit your business.

Seamless can help your business in many ways, including:

- Real-time inventory management across various online sales channels
- Integration of traditional retail POS systems with online inventory
- Streamlining receiving, warehousing, and shipping procedures
- Implementation of powerful networking solutions

Seamless Development is the one-stop source for all of your online selling technology needs. Since we do all custom work, we can create and integrate as much or as little as you need, to your exact specifications.

Technologies

Seamless has Windows networking experts on staff, delivering design, deployment, and administration to small business, remote site, and enterprise networks, including terminal services, DNS, WINS, Exchange Server, Project Server, SharePoint, IIS, and more. We have experience in mixed-environment Windows networking; e.g., integration of Linux or Mac clients. The highest security is built into every project we deliver.

The “always learning” environment at Seamless Development means that we are constantly updating our knowledge by working with the latest technologies, often long before they are released. Partnerships with major software developers and platforms including Microsoft, eBay, and PayPal ensure that we are always ahead of the curve; we call it “bleeding-edge” technology.
